### Cardiovascular pathology for medical education - WebPath

A myocardial infarction (MI), also known as a heart attack, occurs when blood flow decreases or stops to a part of the heart, causing damage to the heart muscle. The most common symptom is chest pain or discomfort which may travel into the shoulder, arm, back, neck or jaw. Often it occurs in the center or left side of the chest and lasts for more than a few minutes.

### Myocardial infarction - Wikipedia

Acute myocardial infarction is the medical name for a heart attack. A heart attack is a life-threatening condition that occurs when blood flow to the heart muscle is abruptly cut off, causing ...

### Acute Myocardial Infarction: Causes, Symptoms, and Treatment

Myocardial infarction (MI), is used synonymously with coronary occlusion and heart attack, yet MI is the most preferred term as myocardial ischemia causes acute coronary syndrome (ACS) that can result in myocardial death. In an MI, an area of the myocardium is permanently destroyed because plaque rupture and subsequent thrombus formation result in complete occlusion of the artery.
