a modern approach to the design of embedded computing systems In today's world, embedded systems are everywhere—homes, offices, cars, factories, hospitals, planes, and consumer electronics. Their huge numbers and new complexity calls for a new design approach, one that emphasizes high-level tools and hardware/software tradeoffs, rather than low-level assembly-language programming and logic design.

Design Metrics of Embedded Systems A Design Metric is a measurable feature of the system's performance, cost, time for implementation and safety etc. Most of these are conflicting requirements i.e. optimizing one shall not optimize the other: e.g. a cheaper processor may have a lousy performance as far as speed and throughput is concerned.
