Sons Solution of  
Exercise C-1.8 Since  $r$   
is represented with 100  
bits, any candidate  $p$   
that the eavedropper  
might use to try to  
divide  $r$  uses also at  
most 100 bits. Thus,  
this very naive  
algorithm requires  $2^{100}$   
divisions, which  
would take about  $2^{80}$   
seconds, or at least  $2^{55}$   
years.
